salesagent3

Instruction: Backend

`npm run dev`

`"dev": "nodemon --config nodemon.json",`

For Test Coverage

`npm run test --coverage`

In this lead lifecycle management system, the main entities and relationships are structured as follows:

1. Lead

A lead represents a potential buyer.

Attributes:

- LeadID
- Name
- ContactInfo
- Source
- InquiryDate
- Status

Relationships:

- A lead can have one or more lead assignments, reservations, financial statuses, legal statuses, and sales.

2. SalesAgent

A sales agent is responsible for following up with the lead.

Attributes:

- AgentID
- Name
- Email
- PhoneNumber
- Role

Relationships:

- A sales agent can be assigned to many leads.

3. LeadAssignment

This represents the process of assigning a lead to a sales agent.

Attributes:

- LeadID
- AgentID
- FollowUpStatus
- PreferredPropertyType
- Budget
- Notes

Relationships:

- Each lead assignment relates to a single lead and a single agent.

4. **Reservation**

This represents the reservation details for a property that a lead expresses interest in.

Attributes:

- ReservationID
- LeadID
- PropertyID
- ReservationDate
- ReservationFee
- ExpectedClosingDate

Relationships:

- A reservation is linked to one lead.

5. **FinancialStatus**

This indicates the financial status of a lead after they've submitted their financial documents.

Attributes:

- LeadID
- FinancialStatus (Approved/Rejected)
- LoanAmount
- PaymentPlan

Relationships:

- Each lead has one associated financial status.

6. **LegalStatus**

Represents the status of legal documentation for a lead.

Attributes:

- LeadID
- ContractSigned (Yes/No)
- LegalNotes

Relationships:

- Each lead has one associated legal status.

7. Sale

Represents the completion of a property sale.

Attributes:

- SaleID
- LeadID
- SaleDate
- FinalSalePrice
- CommissionDetails

Relationships:

- Each lead can have one sale associated with it once the transaction is complete.

Use Cases

1. Lead Creation and Capture

Description: When a lead is generated from various sources like third-party platforms, marketing campaigns, or landing pages, the system captures the lead's details.

Inputs: Lead details (name, contact info, source, inquiry date)

Outputs: A new lead entry in the system with the status set as "Unassigned".

2. Lead Assignment

Description: The system allows a sales agent to be assigned to a lead, but only if the lead's status is "Unassigned".

Inputs: Agent ID, Lead ID

Outputs: The lead's status is updated to "Assigned to Sales Agent".

3. Reservation Creation

Description: A lead, after showing strong interest in a property, can initiate the creation of a reservation. This includes selecting a property, setting a reservation date, and potentially paying a fee.

Inputs: Lead ID, Property ID, Reservation Date, Reservation Fee, Expected Closing Date

Outputs: A new reservation entry is created in the system, associated with the lead.

4. Financial Approval

Description: The finance team evaluates the lead's financial status based on the

submitted documents and either approves or rejects the financing.

Inputs: Financial documents, loan amount, payment plan

Outputs: The lead's financial status is updated to "Approved" or "Rejected".

5. **Legal Finalization**

Description: After the financials are approved, the legal documentation, such as the purchase agreement or contracts, is reviewed and signed.

Inputs: Legal documents (contracts)

Outputs: The lead's legal status is updated to "Finalized".

6. **Sale Finalization**

Description: Once the legal process is completed, the property sale is finalized. This marks the lead as a customer.

Inputs: Sale date, final sale price, commission details

Outputs: The lead's status is updated to "Converted", indicating that the property has been sold.

7. **Lead Cancellation**

Description: A lead can only be canceled during the reservation stage, and the cancellation must be recorded with a reason (e.g., financial issues, change of mind, found another property).

Inputs: Lead ID, cancellation reason

Outputs: The lead's status is updated to "Cancelled".
